The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response By Barry Wilson

The Biogeography of the Australian North West Shelf provides the first assembly of existing information of the North West Shelf in terms of geological, oceanographic and climatological history and current understanding of such issues as biodiversity, connectivity, larval dispersal and speciation in the sea that determine the distribution patterns of its invertebrate fauna. It is intended as a source of information and ideas on the biota of the shelf and its evolutionary origins and affinities and the environmental drivers of species' ecology and distribution and ecosystem function.

Regulators and industry environmental managers worldwide, but especially on the resource-rich North West Shelf, are faced with having to make decisions without adequate information or understanding of conservation values or the factors that drive ecosystem processes and resilience in the face of increasing anthropogenic and natural change. This book will provide a resource of information and ideas and extensive references to issues of primary concern. It will provide a big-picture narrative, putting the marine biota into a geological, evolutionary, and regional biodiversity context.

- The first book to cover the major benthic habitats and physical and ecological condition of the North West Shelf of Australia
- Covers new information on geomorphology and biota of coral reefs and other invertebrate habitats that are key species and functional groups of the North West Shelf
- Introduces new ideas on biogeographic processes and patterns in tropical seas

Editorial Review

Review

"...an extremely comprehensive account of the wide range of habitats in the region...well written and presents concepts and terminology consistently in a way that is digestible to a wide audience." --**The Quarterly Review of Biology**

From the Back Cover

The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response reviews the marine habitats, biota, and geological and biogeographic history of this previously little-known but species-rich continental margin of the tropic zone currently under rapid development and exploitation for minerals and hydrocarbons. This book provides environmental regulators and managers with an understanding of conservation values and the factors that drive ecosystem processes and resilience in the face of increasing anthropogenic and natural change.

Key features:

- The first book to cover the major benthic habitats and physical and ecological conditions of the North West Shelf of Australia
- Covers new information on geomorphology and biota of coral reefs and other invertebrate habitats that are key species and functional groups of the North West Shelf
- Introduces new ideas on biogeographic processes and patterns in tropical seas

Also available from Elsevier: *Corridors to Extinction and the Australian Megafauna?* Steve Webb (2013, 9780124077904)

About the Author

Barry Wilson graduated with Honours in science from the University of Western Australia (zoology and geology majors) and was awarded a PhD from that university in 1965 with a thesis on the reproductive biology and ecology of marine molluscs. This was followed by a post-doctoral appointment as Fulbright Scholar and Research Fellow in the School of Evolutionary Biology at Harvard University. Barry has published many research papers on molluscan systematics and coral reef biology and six reference books on Australian marine molluscs.

Barry is an experienced scuba diver (initially self taught in the 1950s when there were no instructors around) and a proficient undersea photographer. He has had extensive marine field experience in the Australian, Pacific and South East Asian regions. He led a biological survey to the Moluccas in 1970 aboard an American research vessel. In 1973, he participated in an American survey of crown-of-thorns seastars in Micronesia and followed this with a three-year research program on crown-of-thorns infestations on coral reefs in northern Western Australia.

Barry has held positions as Curator of Molluscs at the Western Australian Museum, Director of the National Museum of Victoria (Melbourne) and Director of Nature Conservation in Western Australia. He served for 9 years as Chairman of the Western Australian Marine Parks & Reserves Authority (responsible for the

establishment and management of that State's extensive marine conservation reserves system) and 7 years as a Director and Managing Director of an organisation known as the Australian Wildlife Conservancy that has built a network of private conservation reserves for endangered species throughout Australia.

Now, after "retirement", Barry provides consulting services to Government and industry, mainly in marine science and environmental protection on the North West Shelf.

In 2001 Barry Wilson was awarded the Australian Centennial Medal for distinguished service in marine science.

Users Review

From reader reviews:

Eric Overbay:

Information is provisions for those to get better life, information nowadays can get by anyone with everywhere. The information can be a information or any news even a huge concern. What people must be consider any time those information which is from the former life are challenging to be find than now's taking seriously which one is suitable to believe or which one often the resource are convinced. If you receive the unstable resource then you obtain it as your main information there will be huge disadvantage for you. All those possibilities will not happen with you if you take The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response as your daily resource information.

Gene Lyons:

Precisely why? Because this The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response is an unordinary book that the inside of the e-book waiting for you to snap that but latter it will shock you with the secret it inside. Reading this book beside it was fantastic author who write the book in such remarkable way makes the content interior easier to understand, entertaining approach but still convey the meaning fully. So , it is good for you because of not hesitating having this any more or you going to regret it. This amazing book will give you a lot of gains than the other book have got such as help improving your talent and your critical thinking method. So , still want to hold up having that book? If I were you I will go to the e-book store hurriedly.

Lynne Young:

Is it a person who having spare time and then spend it whole day simply by watching television programs or just laying on the bed? Do you need something totally new? This The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response can be the response, oh how comes? The new book you know. You are consequently out of date, spending your time by reading in this completely new era is common not a geek activity. So what these publications have than the others?

Vanessa Gilliam:

A number of people said that they feel weary when they reading a e-book. They are directly felt that when they get a half areas of the book. You can choose the book The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response to make your current reading is interesting. Your personal skill of reading expertise is developing when you including reading. Try to choose simple book to make you enjoy to study it and mingle the impression about book and reading especially. It is to be initial opinion for you to like to open up a book and study it. Beside that the guide The Biogeography of the Australian North West Shelf: Environmental Change and Life's Response can to be your brand new friend when you're sense alone and confuse using what must you're doing of these time.
