## Logic and Design of Computer Programs By Jim Messinger

The purpose of the book is to help readers learn general programming topics, structured programming principles, and how to use basic tools and algorithms. There are two modules contained in Messinger: "Numbers and Computer Arithmetic" and "Function and Program Design." These modules make it obvious that the material does not have to be followed in a particular sequence. Messinger is designed for those interested in learning language-independent, introductory programming.
