The Biological Basis of Cancer By Robert G. McKinnell, Ralph E. Parchment, Alan O. Perantoni, G. Barry Pierce

This text is designed to be used for an undergraduate course on cancer. It covers everything from the molecular to the clinical aspects of the subject, and has a lengthy bibliography designed to assist newcomers with the cancer literature. An introduction acquaints students with the biological principles of cancer and the human dimensions of the disease by considering genuine cases of cancer in fictionalized letters. Other chapters discuss cancer pathology, metastasis, carcinogenesis, genetics, oncogenes and tumor suppressors, epidemiology, and the biological basis of cancer treatment. The book includes an appendix with a description of selected cancers. A glossary of cancer-related terms is included. Upper-division undergraduates with a background in freshman biology and chemistry, as well as beginning graduate students will find this a most useful text.

Editorial Review

Review

'... excellent introductory text that can be recommended to both undergraduates and postgraduates in the biological sciences'. The Times Higher Education Supplement

'This is a well written and interesting book that many non-specialists will find interesting and educational.' Immunology

'However, this is an excellent textbook aimed at the undergraduate. It is easy to see how a young biology major taking this course could become interested in cancer research or cancer medicine.' Book Reviews

'... this is an excellent textbook aimed at the undergraduate. It is easy to see how a young biology major taking this course could become interested in cancer research or cancer medicine.' Paul P. Carbone, Madison, Wisc

Users Review

From reader reviews:

Beverly Dewitt:

What do you regarding book? It is not important along with you? Or just adding material when you require something to explain what you problem? How about your extra time? Or are you busy person? If you don't have spare time to do others business, it is make one feel bored faster. And you have time? What did you do? All people has many questions above. They need to answer that question since just their can do that will. It said that about book. Book is familiar on every person. Yes, it is right. Because start from on kindergarten until university need this The Biological Basis of Cancer to read.

Darius Cramer:
