Explorations in Topology, Second Edition: Map Coloring, Surfaces and Knots (Elsevier Insights) By David Gay

Explorations in Topology, Second Edition, provides students a rich experience with low-dimensional topology (map coloring, surfaces, and knots), enhances their geometrical and topological intuition, empowers them with new approaches to solving problems, and provides them with experiences that will help them make sense of future, more formal topology courses.

The book's innovative story-line style models the problem-solving process, presents the development of concepts in a natural way, and engages students in meaningful encounters with the material. The updated end-of-chapter investigations provide opportunities to work on many open-ended, non-routine problems and, through a modified "Moore method," to make conjectures from which theorems emerge. The revised end-of-chapter notes provide historical background to the chapter's ideas, introduce standard terminology, and make connections with mainstream mathematics. The final chapter of projects provides ideas for continued research.

Explorations in Topology, Second Edition, enhances upper division courses and is a valuable reference for all levels of students and researchers working in topology.

- Students begin to solve substantial problems from the start
- Ideas unfold through the context of a storyline, and students become actively involved
- The text models the problem-solving process, presents the development of concepts in a natural way, and helps the reader engage with the material

Editorial Review

Review

"...the tasks that are asked of the reader are challenging and require clear thinking. This text could be an exiting tool for self study or a non-traditional course that is not just based on lectures."--**Zentralblatt MATH, Sep-14**

"Each chapter ends with a section marked "Notes", typically about two pages long, which gives a somewhat broader perspective of the material covered in that chapter, typically placing each topic in historical context, and sometimes giving precise definitions and statements of theorems."--**MAA.org, May 4, 2014**

Users Review

From reader reviews:

Catherine Scott:

Do you have favorite book? Should you have, what is your favorite's book? Book is very important thing for us to understand everything in the world. Each e-book has different aim or perhaps goal; it means that book has different type. Some people feel enjoy to spend their a chance to read a book. They are reading whatever they consider because their hobby is reading a book. Think about the person who don't like examining a book? Sometime, individual feel need book if they found difficult problem or exercise. Well, probably you will need this Explorations in Topology, Second Edition: Map Coloring, Surfaces and Knots (Elsevier Insights).

Charles Carey:

What do you concentrate on book? It is just for students since they are still students or the idea for all people in the world, the actual best subject for that? Just simply you can be answered for that concern above. Every person has various personality and hobby for each and every other. Don't to be pushed someone or something that they don't wish do that. You must know how great along with important the book Explorations in Topology, Second Edition: Map Coloring, Surfaces and Knots (Elsevier Insights). All type of book is it possible to see on many sources. You can look for the internet sources or other social media.

Floyd Alling:

In this time globalization it is important to someone to acquire information. The information will make you to definitely understand the condition of the world. The fitness of the world makes the information easier to share. You can find a lot of references to get information example: internet, newspaper, book, and soon. You can observe that now, a lot of publisher in which print many kinds of book. The book that recommended to you is Explorations in Topology, Second Edition: Map Coloring, Surfaces and Knots (Elsevier Insights) this reserve consist a lot of the information with the condition of this world now. This specific book was

represented so why is the world has grown up. The vocabulary styles that writer require to explain it is easy to understand. Often the writer made some exploration when he makes this book. Honestly, that is why this book appropriate all of you.

Donna Moore:

As a scholar exactly feel bored to reading. If their teacher inquired them to go to the library or make summary for some reserve, they are complained. Just small students that has reading's heart and soul or real their hobby. They just do what the teacher want, like asked to the library. They go to there but nothing reading critically. Any students feel that reading through is not important, boring in addition to can't see colorful photos on there. Yeah, it is for being complicated. Book is very important in your case. As we know that on this period, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. Therefore , this Explorations in Topology, Second Edition: Map Coloring, Surfaces and Knots (Elsevier Insights) can make you really feel more interested to read.
